

Mistral Doors LF

COMING SOON

This is the low-front version of Mistral Doors, aesthetically defined by its reduced front height and enhanced product visibility. Mistral Doors LF offers low energy consumption and features a bottom-mounted evaporator for easy servicing.

Mistral represents the latest generation of DRR refrigerated cabinets. A range of multi-deck vertical cabinets designed to ensure high energy efficiency and reduced consumption, while greatly simplifying multiplexing operations. The large display area offers a load capacity of up to 60% more compared to models with the same footprint—a benefit that reduces restocking time while offering customers a wider product selection. Mistral’s elegant, minimalist design is engineered to ensure maximum product visibility and seamless integration into any store layout. Some versions are also available with a transparent back for a panoramic view of the goods on display. This standardized low front height – for both positive and negative temperature models – ensures outstanding aesthetic uniformity within the point of sale.

CLIMATIC CLASS: 3M1 - 3M2 - 3H

ENERGY LABEL

Energy class referred to a specific cabinet configuration, which may significantly change for a different one.
