

Angel Doors

Multi-shelf vertical cabinet with doors at medium temperature suitable for the display and self-service sale of prepacked products such as meat, delicatessen, dairy products, fruit & vegetables.

Angel is a range of positive-temperature multi-deck display cabinets integrating the well-established ecosystem technological solution. Developed in collaboration with the University of Padua, this solution delivers excellent results in terms of energy savings. The airflow is engineered to ensure a perfectly homogeneous product temperature throughout the cabinet, preventing cold air leakage and the resulting energy waste, while keeping the ambient room temperature consistently constant. Angel is also characterized by its elegant shapes, which adapt perfectly to any display requirement: from small retail shops to hypermarkets.

CLIMATIC CLASS: 3M1 - 3M2 - 3H

ENERGY LABEL

Energy class referred to a specific cabinet configuration, which may significantly change for a different one.
