

Mistral Doors LF Plus

COMING SOON

This is the Plus version of Mistral Doors LF, which offers all the benefits of Mistral Doors LF – reduced front height, outstanding product visibility, low energy consumption, and a bottom-mounted evaporator for easy servicing – but with a higher load and weight capacity thanks to the double upright on each shelf.

This model is part of the Mistral range, the latest generation of DRR refrigerated cabinets. This series of multi-deck vertical cabinets combines reduced energy consumption with high energy efficiency and has been specifically developed to simplify multiplexing operations during installation as much as possible. The large display area offers a load capacity of up to 60% more compared to variants with the same footprint: a benefit that reduces restocking times and ensures a wider choice of products for customers. Mistral’s elegant and minimalist design is engineered to ensure maximum product visibility and a harmonious integration into any store layout. Some models are also available with transparent backs, allowing a panoramic view of the displayed goods. This reduced and standardized front height – for both positive and negative temperature models – ensures outstanding aesthetic uniformity within the sales area.

CLIMATIC CLASS: 3M1 - 3M2 - 3H

ENERGY LABEL

Energy class referred to a specific cabinet configuration, which may significantly change for a different one.
